

## INTRODUCTION

Consteel CFWP special formula well blocks for ladles purging plug which have specific working environment design features not only limited to the chemical composition, but aslo the structural aspects, they are character ized by following aspects

- Excellent thermal shock resistant, molten steel, inclusions erosion&corr osion resistant;
- Superior performance in life expectancy;
- Designed and inspected according to particular applications;
- Extraordinary convenient to fabrication & replacement to save cost for customers;

## COMPOSITION&PROPERTY

| Applications               | -                | Purging plug |

Note:
The above parameters are for customers' reference only and for the particular product configuration, please reach our sales engineer to fill up some questionnaire to enable us to provide the one meeting with your smelting process features and specific TCO target.

## HOW TO SELECT THE RIGHT ONE

When it comes to the design & configurations of well blocks, in addition to take into account the structure and size of specific EAF/LF furnace, the particular furnace working conditions which determine the wearing mechanism must be conceived and weighed for the formula d esign and processing treatment. Consteel has veteran experiences in not only above aspec ts but also the final inspection to guarantee our customer the top quality purging plug.
